THE LOXLEY

The Loxley is a 6ft 6" x 6ft 6" octagonal cedar greenhouse.

A neat and tidy solution for any location where space is limited.

Standard features:

- * **Made from 100% Western Red Cedar**
 - * **6ft 4" to eaves**
- * **4mm English Toughened Safety Glass**
- * **METHOD OF GLAZING no block to hold glass in place, the glass overhangs the wood**
- * **One roof vent with Mk7 Bayliss autovent and two manual side opening vents**
 - * **Staging on five bays and three high level shelves**
 - * **Choice of five colours**
- * **Glass to ground, cedar panels to staging height or a combination of both at NO EXTRA COST**
 - * **Door can open whichever way you choose**

Price: £1795 including VAT, delivery and installation

THE DAGDALE

A popular, stylish and elegant alternative to the traditional shaped greenhouse. It provides an excellent solution for the smaller sized garden. Decagonal in shape, it offers a large internal working area, maximising your space. This model allows for plenty of light making it ideal for starting off young plants.

An attractive feature that will enhance your garden all year round, the Dagdale is a high spec greenhouse, that includes many features as standard:

- * Entirely Western Red Cedar construction**
 - * 6ft 4" to eaves**
 - * 4mm English Toughened Safety Glass**
- * METHOD OF GLAZING no block to hold glass in place, the glass overhangs the wood**
 - *Two auto roof vents (Bayliss Mk7) and two side vents**
 - * FREE Staging and shelves fitted (staging fitted on seven bays, shelves on three)**
 - * Locking door (hinges on left or right)**
- * Glass to ground, cedar panels to staging height or a combination of both at NO EXTRA COST**
 - * STANDARD colours available**

Price: £1995 including VAT, delivery and installation

THE STRAMSHALL

A recent addition to our range, the Stramshall has proved to be incredibly popular, combining style with functionality. Measuring 6ft 6" x 8ft 6" this greenhouse is compact, yet maximizes the available space due to its octagonal shape.

Double doors allow easy access, and as with all of our greenhouses, the sides can be panelled, glass to ground or a combination of both at no extra cost.

Standard features:

- Entirely Western Red Cedar construction**
 - * 6ft 4" to eaves**
 - * 4mm English Toughened safety glass**
- * METHOD OF GLAZING, no block to hold glass in place, the glass overhangs the wood**
 - *Two auto roof vents(Bayliss Mk7) and two side vents**
- *FREE Staging and shelves fitted (staging fitted on seven bays, shelves on three)**
 - * Locking door (hinges on left or right)**
- * Glass to ground or cedar panels to staging height at NO EXTRA COST**
 - *STANDARD Colours available**

Price: £1895 including VAT, delivery and installation

THE BRAMSHALL

A larger version of the Dagdale greenhouse.

Measuring 10ft x 8ft, this greenhouse would maximise the potential of any garden and provides an attractive working space. Double doors provide easy access and staging on seven sides with high-level shelving on three sides gives an ideal surface for potting, planting and growing. A practical and stylish addition to any outdoor space. The Bramshall features two roof vents with autovents as standard, black antique door and window furniture, cedar construction and 4mm English toughened safety glass.

Standard features:

- * Entirely Western Red Cedar construction**
 - * 6ft 4" to eaves**
 - * 4mm English Toughened Safety Glass**
- * METHOD OF GLAZING, no block to hold glass in place, the glass overhangs the wood**
 - * Two auto roof vents (Bayliss Mk7) and two side vents**
- * FREE Staging and shelves fitted (staging fitted on seven bays, shelves on three)**
 - * Locking double doors**
- * Glass to ground, timber panels to staging height or a combination of both at NO EXTRA COST**
 - * STANDARD colours available**

Price: £2250 including VAT, delivery and installation

THE BROMLEY

Proving extremely popular, the traditional Bromley is one of the strongest quality greenhouses available on the UK market.

We guarantee that you will be impressed with our solid hand crafted products. Careful consideration is given to every aspect resulting in a superb and high quality greenhouse.

The framework is constructed entirely from Western Red Cedar ('Thuja Plicata') which produces natural oils that act as preservatives to protect the wood from insect attacks and decay. Beauty aside, the Western Red Cedar's practicality and cellular structure creates air spaces that give it an insulation value higher than most woods. Buildings featuring Cedar panels tend to stay warmer in the winter. Automated roof vents allow ventilation around the greenhouse to keep it cooler in the summer.

The Bromley is available in either glass to ground, cedar panels or a combination of both. Cedar panels help to lower heating costs and add character to the overall look of the building. The glass to ground model gives you extra light and is ideal when you need growth from ground level.

A heavy duty structure that combines strength, durability, style and beauty. An attractive feature to complement any surrounding. It is built to meet the requirements of the most demanding gardening enthusiast or professional alike.

Our aim over the years has been to design and manufacture a high quality greenhouse at a realistic price. We are proud to say that we have achieved this in the form of the Bromley.

THE BROMLEY

Standard features:

- * Window sections are constructed from 2" x 2" timber and a sturdy 3" x 2" is used for the rafters
 - * 4mm English Toughened Safety Glass
- * 4ft, 5ft or 6ft eaves height (this can be any height)
- * Choice of cedar panels to staging height, glass to ground or a combination of both
 - * Anodised Bayliss autovents Mk7
 - * Ridge cresting and finials
 - * Rainwater gutters and down pipes
- * Locking hinged door with antique fittings
- * Freestanding two-tier staging along one complete side
 - * Choice of colours
- * Brown aluminium capping for a maintenance free roof available at an extra cost

THE KINGS BROMLEY

The Kings Bromley greenhouse is an amalgamation of the Bromley and Kingsbury models, featuring a 45 degree pitch with wider 22" panes. This is an update on the Victorian style, giving the classic shape and height with a contemporary twist.

The Kings Bromley is a beautiful and functional feature for any setting and can be manufactured to any size required; fitted on to your dwarf wall or freestanding at no extra cost.

STANDARD FEATURES

- *Western Red Cedar construction
- *Eaves height - range from 5ft or 5ft 6" (no extra cost)
- * 22" panes of 4mm English toughened safety glass
 - * 45° pitch
- * Locking hinged door with antique fittings
 - * Anodised Bayliss autovents Mk7
- *Cedar panels to staging height, glass to ground or fitted on your dwarf wall
 - * Ridge cresting and finials
 - * Rainwater gutters and down pipes
 - * Choice of colours
- * Brown aluminium capping for a maintenance free roof available at an extra cost

THE LEAN-TO GREENHOUSES

If you have a location available on your house wall it is an ideal spot to site a lean-to greenhouse.

Fitted on to your dwarf wall, cedar panels or glass to ground - the choice is yours. Each building is created individually to your unique requirement. Constructed entirely from Western Red Cedar and using 4mm English Toughened Safety Glass.

Written quotations available on request

THE VANDENBURG

The Vandenburg is an impressive and unique building, elegantly crafted from Western Red Cedar (*Thuja Plicata*). This collection has the space and style of the Edwardian glasshouse combining beauty with functionality. It is the perfect enhancement to a fine English garden, a structure that will bring pleasure and at the same time offer an exceptional gardening experience. Ideal for cultivation and growing. All individually hand crafted and engineered by our fine team of highly skilled craftsmen using age old mortice and tennon jointing. Tailor made to your own required size, lean-to or freestanding - the choice is yours.

All glazing is toughened English Safety Glass, firmly secured with our aluminium capping for a maintenance free roof against a gasket, with seals on the underside of the glazing achieving high storm and wind proof standards.

Standard features:

- * **4/6mm English Toughened Safety Glass (to allow single sheet glazing in roof)**
 - * **Brown aluminium capping for maintenance-free roof**
 - (as standard on the Vandenburg)**
 - * **Anodised Bayliss autovents MK7**
 - * **Rainwater gutters and down pipes**
 - * **Locking hinged double door with antique fittings**
 - * **Choice of colours**
 - * **Elegant hipped roof**
- * **Choice of styles - freestanding, lean-to, panelled, glass to ground or fitted on to a dwarf wall**

Written quotations available on request

THE BESPOKE GREENHOUSES

Our team at Woodpecker Joinery proudly brings our well known bespoke range of products to you. Combining quality, excellence and beauty with superb value for money. We guarantee you complete satisfaction.

We can build anything to complement your surroundings and make your gardening dreams come true, giving you everything you have ever wanted from a greenhouse.

Out of the ordinary, intricate or something you perhaps thought was not possible - we have the perfect solution. Just let us know what your dream is and we will work with you to achieve it.

THE BESPOKE GREENHOUSES

The advantages of a Bespoke building are:

- *Any size and style of building is possible**
- *Built to you exact specification**
- *Choice of freestanding, lean-to or fitted on to a dwarf wall**

Written quotations available on request to your individual specification

With so many styles on offer there is no need to compromise!

HOME OFFICES

Woodpecker Joinery proudly presents our new range of home offices. The perfect space for study, work or simply relaxing come rain or shine! We can build the office to any size you require and can alter the specification to suit your needs.

The home office is a high specification building featuring:

- * Western Red Cedar construction**
- * Felted Roof (as standard) OR our new and unique slate appearance rubber roofing system (available as an optional extra)**
- * 4mm English Toughened Safety Glass**
- * Two side vents**
- * Locking doors (hinges on left or right)**
- * STANDARD colours available**

Written quotations available on request

ALUMINIUM CAPPING

Although Cedar Wood is durable and generally requires staining only once every 2-3 years, the aluminium capping (optional with some of our greenhouses) provides a maintenance free roof for those who wish to avoid climbing to attend their greenhouse. With this system, the glass sits on top of the rafters on a rubber strip and the aluminium secures the glass in place. This leaves no wood on the roof exposed to the elements, making looking after your greenhouse a pleasure, not a chore!

BAYLISS AUTOVENT MK7

The Bayliss Mk7 Autovent has been designed for aluminium or timber framed hinged vents measuring up to approximately 2ft square (60cm square).

It fits neatly, close to the glass, consequently taking up less headroom than a normal stay on a roof vent. This model is attached to the vent, and can be set to start opening the vent at temperatures between 55°F (12°C) and 75°F (25°C), giving a maximum vent opening of approximately 12”.

Autovents operate on a wax cylinder system, so requires no electricity.

Above picture shows a triple spring autovent

GREENHOUSE BLINDS

New to our range, greenhouse blinds are now available. We can source blinds to fit any rectangular greenhouse.

TALL CEDAR COLDFRAME

An 8ft x 2ft coldframe (in red cedar preservative)

Our tall coldframes are made from high quality Western Red Cedar with sliding front doors and opening tops, fitted with 4mm toughened safety glass.

Brass handles are fitted to the sliding doors and opening tops. Internal cedar supports allow the tops to be held open and easy access into the upper frame. A choice from our standard colour collection is available .

Option of sizes :

4ft x 2ft tall coldframe £615
6ft x 2ft tall coldframe £775
8ft x 2ft tall coldframe £995

****The prices listed above for coldframes include VAT and assembly. The surcharge for delivery will vary depending on the distance you are from Hixon, Staffordshire. We do not use carrier firms for our coldframes.****

WESTERN RED CEDAR COLDFRAME

We use only the highest quality Western Red Cedar and, as with all of our garden buildings, the coldframe units are created with high precision mortice and tenon joints.

Brass handles and hinges give an elegant look and the external cedar supports allow the tops to be held open and easy access into the frame. All models have opening tops, each one with a single pane of 4mm English toughened safety glass. A choice from our standard colour collection is available.

Option of sizes:

4ft x 3ft - £275
5ft x 3ft - £325
6ft x 3ft - £400
8ft x 3ft - £500

TANALISED COLDFRAME

We use a quality green tanalised softwood and the units are created with high precision mortice and tenon joints. A strong and durable product.

Option of sizes :

4ft x 3ft - £195
5ft x 3ft - £225
6ft x 3ft - £245

****The prices listed above for coldframes include VAT and assembly. The surcharge for delivery will vary depending on the distance you are from Hixon, Staffordshire. We do not use carrier firms for our coldframes****

**BESPOKE COLDFRAME TOPS CAN BE MANUFACTURED ON REQUEST
GOLIATH STAGING**

94" model with complete removable lower shelves

Over the years we have been asked to design and manufacture strong functional greenhouse staging and are extremely proud of our Goliath staging because we believe it is probably the strongest available on the market.

Constructed from 45mm x 45mm framing with 70mm x 15mm slats. All timber is tanalised (green) for a long life against rot. All models come with drop-in lower shelves which can be removed.

Created to ensure you have an ideal working height.

22" (550mm) deep x 46" (1170mm) long £70
22" (550mm) deep x 70" (1780mm) long £100

TRADITIONAL OAK WATER BUTT

Following many of our customers requesting accessories, we are pleased to offer this traditional oak cask which was originally used by Scottish and Spanish distilleries in the course of maturing malts and sherry. Each has been individually adapted into a water butt. Not only eye-catching but an environmentally friendly method of conserving your water. It has a removable oak lid with a cut out for down pipe access and oak handle. A brass tap is fitted at the base. The timber is treated with Danish oil to restore the barrel to its former beauty. An ideal addition and first class product to complement your Cedar greenhouse.

56 gallons

Height 39" Diameter 27/30"app

Cost - £125

****Price includes VAT. Please note that we only supply our Oak Barrel water butts with greenhouses and cannot supply separately.****

CEDAR WATER BUTT STAND

A strong, durable Western Red Cedar stand. Created to elevate the butt and allow ample height to fill a watering can. **Price £20**

CONTEMPORARY CEDAR WATER BUTT

Save your rainwater in style! Our contemporary Cedar Water Butt has the beauty of Western Red Cedar wood and the durability of plastic, making it ideal for the modern eco-friendly gardener. Handmade, it comes with a brass tap fitted at the base and lift-off lid and is lined with a PVC liner to prevent leaks.

The water butt comes with a cedar plinth as standard and with a choice of colours or treated with Danish Oil as shown right. A perfect complement to your cedar greenhouse.

DIMENSIONS:

Height: 900mm Width: 600mm
Depth: 600mm Capacity: 65 gallons

Price: £225

****Price includes VAT but not delivery****

WHY CHOOSE CANADIAN WESTERN RED CEDAR (THUJA PLICATA)

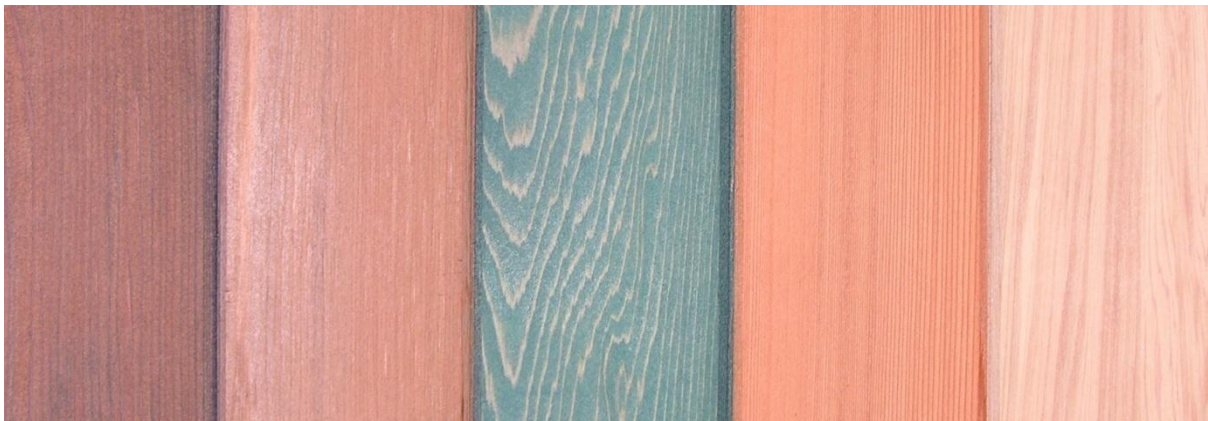

Beauty : Found in Canada's Pacific Northwest. Renowned for its natural and outstanding physical properties. With a uniform of fine grained texture combined with a palette of warm, mellow tones ranging from light amber to deep honey brown. Its rich colour is beautifully complimented by a natural satin lustre and a unique fragrance of a subtle aroma.

Durability : Western Red Cedar produces natural oils that act as preservatives to protect the wood from insect attacks and decay. Its ability to produce such preservatives increase with age - allowing the wood to withstand years of usage. In addition it is a very stable wood that lies flat and stays straight. Compared to other woods, it boasts a very low shrinkage value, which makes it ideal for use in high-moisture areas.

Practicality : Beauty aside, the Western Red Cedar's practicality and cellular structure creates interior air spaces that give it an insulation value higher than most woods. Buildings which feature cedar panelling and siding tend to stay warmer in the winter.

Please Note : All of the timber used by Woodpecker Joinery is supplied by Members of The Timber Federation who recognise the responsibility and importance to protect the forests for future generations.

CHOICE OF STANDARD COLOURS

Dark Brown

Light Brown

Holly Green

Red Cedar

Clear

Our greenhouses are pre-treated with Premier Wood Preserver by Barrettine which provides the following properties:

- * **The special formulation of Barrettine allows deep penetration of the fungicide into the wood**
- * **Protects against rot, decay and unsightly mould growth**
- * **Contains water repellent waxes**
- * **Harmless to plants when dry**

CHOOSING A SITE FOR YOUR GREENHOUSE

If you already have a level, or nearly flat site it is an ideal place to position your greenhouse as it will require less work and make it easier to achieve a good floor area for the foundations.

Please be aware that overhanging trees can damage a greenhouse and to reduce the risk it is recommended to avoid such an area. However if this is not possible do not worry as pruning provides a solution to the problem.

PREPARATION OF BASES

When preparing a foundation for one of our greenhouses, we recommend you use one of the following:

Paving slabs and concrete pads

The base should be 4" wider than the outside dimension of the size of greenhouse you have chosen.

Dwarf walls or brick plinths

Once you have chosen the size of your greenhouse, have the wall built as close to the size as possible that has been quoted for. We allow a tolerance of 0-70 mm to accommodate different sizes of bricks, mortar joints etc. Once the dwarf wall has been constructed we would ask you to forward the external sizes of your wall and height and width of the doorway to us.

Your wall only needs to be single skin, but depending upon the size of your greenhouse, some supporting pillars may be needed. Just ask us if you are unsure! Your builder should also be able to help.

Our standard single door width is 3ft brick-to-brick and the double door width is 5ft brick-to-brick, but if your aperture is not quite to these sizes, don't worry. As long as we have the exact measurement we can make the door to fit.

HOW TO PLACE AN ORDER WITH WOODPECKER JOINERY (UK) LTD

This is a very simple process. Please contact us with your requirements by telephone, e-mail or letter. We will then provide you with a quotation, which can be amended until you are happy with it and if you would like to proceed we will then forward an order form.

To proceed, please fill in the order form with options listed (i.e. doors to open in/out, hinges left/right , choice of colour etc), sign and return the forms with a 10% deposit made payable to Woodpecker Joinery UK Ltd.

Upon receipt of your order and deposit we will send you a confirmation and offer an installation date of your convenience. Once the greenhouse has been installed to our high standards and your requirements we will ask you to pay the remaining balance to our installation team.

We guarantee our products for 10 years (excluding breakage of glass). Cedar fades naturally to an attractive silvery-grey colour, but if you do not want this to happen, we would recommend choosing one of our coloured stains (see page 24 for our range). Cedar wood is very durable and contains its own natural preservatives, but in order to keep a good finish on the greenhouse and maintain its fungicidal properties, we recommend restaining it once every two to three years.
